THE GEMINI[®]
Inspiring Innovations

Hospital Information Management System

Our specialty is implementing and optimizing Health Information Technology so that you can focus on patient care.

Managing hospital operations isn't easy these days. You have to find ways to increase efficiency, reduce costs and keep up with ever-changing regulatory compliance requirements – all while staying focused on delivering quality care.

Technology can help you meet today's challenges; however, implementing, managing and optimizing EHR and ERP application software can be a challenge in itself. Preparing for an implementation, evaluating workflows and managing the implementation process can require an army of people. So, for months, perhaps a year or longer, you take doctors, nurses and clinicians away from your patients to work on something that's not their area of expertise.

MAYBE IT'S TIME TO CALL IN A SPECIALIST.

At **The Gemini**, we've helped healthcare providers alleviate the pain of technology selection, implementation, adoption and operations for the past 20 years. We're the company with a full spectrum of products and services to guide you through each step of the entire application lifecycle – from developing your overall technology strategy and reimplementation planning to the tactics of orchestrating the implementation itself, and from post-implementation optimization, support and sustainable adoption to effectively analyzing the data in your new system.

It's comprehensive care for the life of your application.

WE KNOW HEALTHCARE AS WELL AS WE KNOW TECHNOLOGY.

Of course, what we do is only part of the story. It's what we do better that makes The Gemini stand out. With years of experience and hundreds of successful system implementations behind us, we know what works and what doesn't, and leverage this practical experience into best practices. Ultimately, these methodologies help you avoid rework and improve the speed and efficiency of the implementation process. The outcome? The entire process is much less painful for you.

Although we're vendor-neutral, we have extensive experience with virtually every major EHR, ERP and healthcare IT application system on the market today, with clinical, operational, technical and revenue cycle experts in each.

Just as important, our people are professionals who collectively average 20 years' experience in the healthcare industry. This team consists of doctors, clinicians and technicians, as well as MBAs and other certified professionals who know how hospitals and ambulatory clinics are run, how your applications work, and how you can get the greatest returns from your technology investments.

CHOOSE A SOLUTION FOR YOUR TYPE OF HEALTHCARE ORGANIZATION.

Because every kind of healthcare organization has to manage content, whether you're an IDN, Community Hospital, Ambulatory Center, Physician Practice, Specialty or multispecialty hospital, The Gemini has solutions created specifically for each of these areas. With a solution that works for the size and function of your organization, you'll connect content across your organization to give staff and clinicians a more complete patient picture. Not only that, but you can securely share that content with facilities that are within your healthcare network or outside of it, so you help your patients get more informed care no matter where else they need to be treated.

More than 20 years of experience supporting the healthcare industry.

Serving over 230+ Hospitals.

THE GEMINI HIMS

Headquartered in Ahmedabad, India, The Gemini is a leading Global Enterprise Software Provider with a reputation for Innovative Products and Outstanding Services. The Gemini HIMS specializes in providing cloud-based and local server-based solutions to hospitals and clinics across the globe. Integrates with legacy information Systems or can be developed as a Comprehensive EMR solution.

AFFORDABLE

Cost effective and affordable solutions mean that you can start your journey towards an enterprise EMR solution today.

HEALTHCARE BY THE NUMBERS

Better Technology Improves Safety

- 4,000 preventable Adverse Drug Effects are attributable to medication administration errors annually. This is out of 6 million prescription medication doses that are administered per year.
- Reworking and additional treatments required due to sample errors costs hospitals an estimated \$200 to \$400 million per year.
- 8 to 14% of medical records include erroneous information tied to incorrect patient identity.
